

High performance pre-insulated ductwork comes to Australia – The *Kingspan KoolDuct*TM system

Integrated ducting and diffusion systems

20 February 2008

Bradflo Pty Ltd will be celebrating their recent appointment as sole distributor of the *Kingspan KoolDuct*TM System for Kingspan Insulation Ltd, at this year's ARBS exhibition in Melbourne.

ARBS 2008 is expected to attract over 7,000 key stakeholders from across the building services and HVAC and refrigeration industries, providing Bradflo with a platform to officially launch the full range of pre-insulated air distribution ductwork manufactured by Kingspan.

General Manager for Bradflo Mr Raymond Judd, welcomes the opportunities which ARBS 2008 presents to both visitors and exhibitors alike. This major event brings together the key players whilst simultaneously enabling the latest products to be projected into the marketplace and giving an insight into the trends, issues, regulations and cutting edge technologies surrounding the building services and HVAC and refrigeration sectors.

“Bradflo is delighted to have been granted exclusive distribution rights in Australia for the *Kingspan Koolduct*TM and Kingspan *Palduct*TM brands and at the same time is proud to be showcasing some of the industry's most advanced and innovative products and technologies”.

“We would like to invite all of our customers and industry partners to visit us on Stands 278/283 to be the first to view our latest product offerings”.

The *Kingspan KoolDuct*TM System is UL 181 listed and is manufactured to comply with building code requirements for air leakage, fire (including AS 4254), and thermal performance. It is particularly suitable for high specification building projects that require durable materials to perform in moisture and hygiene controlled environments.

The system is lightweight making it easy to install and fabricate in accordance with the Kingspan fabrication manual. It is suitable for low and medium pressure applications (max 1000 Pa).

The rigid phenolic insulation core has a low thermal conductivity of 0.021 W/m·K, allowing a minimal thickness of insulation to achieve specified thermal performance.

Bradflo will be exhibiting its new HVAC ducting systems, VAV diffusers, air curtains, Trox thermal boxes and diffusers, soft air fabric and the full range existing diffusion product lines.
